TUBE DRYER

tube dryer for extrusion line

TR-TECH

AIR DRY Compressed air dryer kit.

- Through ducts appropriately obtained inside the two walls, the air pushes out the water left on the tube during the passage in the cooling tank.
- At the exit of AIR DRY, the tube is ready to be towed and then cut or coiled.
- Each AIR DRY is sized on the external diameter of the tube, in such a way as to guarantee perfect drying.
- AIR DRY is available for tubes with external diameter from 2 to 22mm, or at the customer's request.

Product code: 1295
